Very handy. Questhelper is probably the best solution for a leveling wow wow As we all know, useful people posted comments on wowhead for almost all missions in the game. Simple check boxes allow you to quickly decide which missions to view and which hide at any time, giving you an even greater control over your user interface. You can also use Lightheaded with TomTom, which is a waypoint arrow. Zygor Guide have been around since 2005, and they only got better. Lightheaded Lightheaded is a free addon that helps you level out more quickly showing information and comments from wowhead.com directly to the internal game. It tells you where to collect the missions, execute them and turn them. Azeroth Auto Pilot Azeroth Auto Pilot is a free leveling addon that guides you step by step through levels 110-120 levels. With this addon, everything you have to do is the mouse on a mission, and its overview will be shown quickly as a suggestion. In this way, you can extract the coordinates from Wowhead and ask TomTom to show you the direction to follow. Booster Leveling Addon (interrupted, the old description is located below) Booster is another Addon Premium Leveling which, just like zygours & Aj, will give you an arrow and instructions at the inside of the game that will show you how to level the Your character at 120 as quickly as possible. Examples could be mass killings, missions, dungeon racing, racing battlefield, battlefield goals, professions collection, and more. You can also do other things how to automatically take the missions and deliver them, skip the cinematic scenes (useful if you are leveling an alt and you have already viewed), and tie the keys to the objects of the missions. Join our DISCORD to report bugs, problems or simply have a discussion with us. Booster has existed for almost 10 years, and has been updated for each But now you can get a clear understanding of how to solve any mission without going to any external website. If you take some time set up this combination, can be very useful. XToLevel This A free add-on that makes easier by showing you what AAAs needed to get you to your next level. Apart from the excellent addon and leveling path to 120, they include many other WoW guides as well. TomTom TomTom is a navigational addon that shows you an arrow to various locations that you can specify. ADVERTISEMENT Zygor 1-120 Leveling Addon Zygor Guides is the most popular and, in my opinion, the best WoW leveling addon that will show you how to solo level any class and race to 120 FAST. There're AAAs also a waypoint arrow that helps you to know which direction to go. This addon will help you level in the way YOU want to level, even if you just want to focus on PvP. They're AAAs always quick to release updates for patches and expansions, so you'll always have the guidance that you need. It shows you all the quests you have, as well as each quest's objective, and gives you easy to use drag and drop functionality, which makes it AAAs UI very easily customizable. If you need something simple and effective to level your character faster, definitely check it out. If you encounter any kind of bugs or issues, we would appreciate your feedback. This addon has a lot of other great features built-in, and is also totally free. For example, if you know the coordinates of where you want to go, you can tell TomTom to guide you there with an arrow. Before you know it, you'll be 120. 120.
