It's an innovative system for compressing and bagging compressible waste such as expanded polystyrene, PP boxes, film, bags, and clothing.

Pressa&Insacco is a device designed to be easily positioned at the waste's source, takes up little space, and is multi-material. With Presso&Insacco, you can create a series of big bags that can be transported in vans, without the use of heavy vehicles.

The container is weightless... everything is contained!
